

SUDHIR AMRUSKAR

DevOps Engineer | Cloud Security & BFSI Infrastructure
Pune, Maharashtra | +91 8552970678 | sudhiramruskar22@gmail.com

PROFESSIONAL SUMMARY

DevOps Engineer with 4 years of experience building and securing cloud infrastructure for BFSI/NBFC environments, where uptime and compliance aren't optional. Work spans AWS and GCP, Kubernetes, and Terraform, with a growing focus on cloud security — closing VAPT findings, running WIZ for cloud posture management, and standing up SOC-integrated log monitoring so security teams get signal, not noise. Designed a multi-account AWS Landing Zone for a banking organization and built an in-house EKS-based SSO platform. Also hands-on with AWS Bedrock and Guardrails for AI workload governance. Looking for a DevSecOps or Senior DevOps role where infrastructure reliability and security are treated as the same problem.

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, S3, IAM, RDS, Lambda, VPC, EBS, CloudFront, Route 53, ELB, Auto Scaling, STS, Bedrock, Guardrails, AWS SSO, Organizations/Landing Zone), GCP

Cloud & Application Security: WIZ Cloud Security, VAPT Remediation, Trivy (Container Image Scanning), SonarQube (Code Quality & SAST), IAM Policy Hardening, MFA, Security Groups & ACLs, DevSecOps Practices

CI/CD Tools: Jenkins, CI/CD Pipeline Design, SonarQube, Trivy, Nexus Repository

Infrastructure as Code: Terraform, CloudFormation, Ansible, AWS Landing Zone / Control Tower

Containerization & Orchestration: Docker, Kubernetes, EKS, Ingress Controllers, Java Application Deployment on EKS

Identity & Access: AWS SSO, Multi-Account Landing Zone Architecture, Role-Based Access Control, IAM

Monitoring, Logging & SOC Integration: Amazon CloudWatch, Prometheus, Grafana, ELK Stack, Elasticsearch, SOC Log Alert Configuration

Scripting & Automation: Python (Boto3), Bash, Shell Scripting, Cron Automation

Databases: MySQL, PostgreSQL, MongoDB, RDS, Database Dump/Import/Restore (mysqldump, pg_dump, mongodump/mongorestore)

Version Control: Git, GitHub

Operating Systems: Linux (RHEL, Ubuntu)

Domain Exposure: BFSI / NBFC Infrastructure & Compliance

PROFESSIONAL EXPERIENCE

Senior DevOps Engineer

Jan 2025 – Present

Trio Tech Solutions — Gurugram

- Support cloud infrastructure for BFSI/NBFC clients, where security posture and audit-readiness are as critical as uptime.
- Designed and implemented a multi-account AWS Landing Zone for a banking organization, separating workloads across dev, staging, security, and production accounts to enforce isolation and compliance boundaries.
- Configured AWS SSO with role-based access levels across accounts, aligning permission sets with team function and least-privilege principles.
- Deployed and manage an in-house EKS-based SSO platform, supporting centralized authentication for internal applications.
- Deployed and maintain a Java-based Android (APK) application backend on EKS, managing its containerized build and release pipeline.
- Use WIZ Cloud Security to continuously scan AWS environments for misconfigurations, exposed resources, and compliance drift, driving remediation with engineering teams.
- Integrated Trivy into CI/CD pipelines for container image vulnerability scanning, and SonarQube for static code analysis and quality gates before deployment.
- Track and close VAPT (Vulnerability Assessment and Penetration Testing) findings, coordinating fixes across infrastructure, IAM, and application layers.

- Set up SOC-integrated log alerting and monitoring pipelines for real-time visibility into anomalous activity across cloud workloads.
- Perform database dump, import, and restore operations across MySQL, MongoDB, and PostgreSQL for environment migrations, backups, and disaster recovery drills.
- Work with AWS Bedrock and Guardrails to enforce governance controls on AI/ML workloads.
- Own Dev, QA, and staging release builds; write Dockerfiles and build container images per service.
- Built and maintain Jenkins CI/CD pipelines that cut deployment errors by 40%.
- Deploy and manage 24+ microservices on Kubernetes, including ingress controller configuration.
- Automate infrastructure provisioning with Terraform, cutting manual setup time by 70%.
- Maintain observability with CloudWatch, Prometheus, and Grafana across application and infrastructure layers.

Software Engineer

Sep 2022 – Jan 2024

Skylex Technologies Pvt. Ltd. — Pune

- Managed deployments and infrastructure for AWS-hosted client projects, from provisioning through release.
- Designed scalable infrastructure using Elastic Load Balancers and Auto Scaling within defined VPCs for high availability.
- Provisioned EC2 instances, RDS databases, and Security Groups to support new application environments.
- Replaced legacy cron jobs with event-driven Lambda automation, reducing operational overhead.
- Integrated SonarQube into the CI pipeline for quality gates and set up Nexus for artifact storage.
- Built CloudWatch and Grafana dashboards to monitor CPU, database load, and application metrics.
- Contributed to a 30% improvement in deployment efficiency, shortening time-to-market for client releases.

Junior Engineer (Application Support)

Sep 2021 – Aug 2022

SSP Technology — Pune

- Provided L2 technical support for Linux-based production servers and AWS-hosted applications.
- Worked with developers to triage and resolve application issues, minimizing downtime.
- Supported day-to-day stability of AWS and Linux environments across client systems.

EDUCATION

Bachelor of Computer Applications (BCA)

Savitribai Phule Pune University, Pune | 2019 – 2022

CERTIFICATIONS

- AWS Solutions Architecture (APAC)
- Google Cloud Certification Program
- Microsoft Fundamentals of Generative AI
- AWSome Day — Amazon Web Services
- Linux (RHEL) for DevOps Masterclass — TWS
